

Dear Friend:

When working to solve some of medical science's most difficult problems, collaboration and communication are often the key to new advancements. The Fleet Science Center and [Sanford Burnham Prebys Medical Discovery Institute](#) (SBP) are proud to announce a new partnership to connect our members and the public to collaborators - researchers, clinicians and patients - who are changing the future of medical treatment.

[Cornering Cancer-Research and the Power to Cure](#) will bring together renowned scientists from SBP as well as doctors and patient advocates to share the latest research, the current state of treatment, how new research actually gets translated into new therapies and the patient experience when navigating available treatments.

This discussion series will offer a fascinating look at the unique challenges presented by four different kinds of cancer and the quest for their cures. For details about each event and to buy your tickets in advance, please click on the links below. Tickets are \$10 in advance or \$11 at the door.

As a community-centered organization, the Fleet Science Center has built partnerships with organizations - companies, research institutions, school districts, universities - throughout San Diego County. These partnerships reflect our mission to connect everyone to the power of science and our belief in the value of working toward the collective good.

The Fleet is excited to be partnering with SBP on this series and connecting SBP to our members and the public. We look forward seeing you at these special events.

Sincerely,

Corporate and Foundation Partners
